USER GUIDE

Dryline® Material Calculator

A step-by-step guide to quoting drylining jobs faster — from room dimensions to a full materials takeoff, on site or in the office.

QANTRA DIGITAL CONSULTANCY

V1.0

01 Installing the App

The calculator installs straight to your home screen — no App Store needed. It works offline once installed, so signal on site isn't a problem.

1. **Open the link in Safari**

   On iPhone, the app must be opened in Safari (not Chrome or another browser) for the install option to appear.

2. **Tap the Share icon**

   It's the square with an arrow pointing up, found in the Safari toolbar.

3. **Select "Add to Home Screen"**

   Scroll down the share menu if you don't see it immediately. Confirm the name and tap Add.

4. **Launch from your home screen**

   The app now opens full-screen, like any other app, with its own icon — no browser bar.

> **TIP**
>
> Once installed, the app works without an internet connection for all core features. Only the floor plan PDF upload needs a connection the first time it's used each session.

02 Switching Light & Dark Mode

Use the toggle in the top-right corner of the app to switch themes — useful for bright site conditions versus low light.

☾ Dark Mode

Default. Easier on the eyes indoors or in low light, and saves battery on OLED screens.

☀ Light Mode

Better for bright daylight or direct sun on site, where dark screens can be hard to read.

03 Entering Room Dimensions

The fastest way to get a quote: type in the numbers directly if you already have them from a survey or drawing.

FIELD	WHAT TO ENTER
Length & Width	Internal room dimensions in metres
Ceiling Height	Floor to ceiling height in metres
Doors / Windows	Number of each, plus their average area (defaults provided)
Wastage	Percentage added to cover offcuts and errors — 10% is a sensible default

> **NOTE**
> Door and window areas are subtracted from the total wall area automatically, so you don't need to work that out by hand.

04 Camera Scan Measuring

No tape measure to hand, or want a fast estimate? Use your phone camera to measure any wall.

1. **Tap "Scan Length", "Scan Width" or "Scan Height"**
   Choose whichever dimension you want to measure with the camera.

2. **Take a photo, straight-on if possible**
   Photograph the wall or floor you want to measure, keeping the camera as level and front-on as you can.

3. **Mark a known reference length**
   Tap the two ends of something you know the size of — a standard door (2.0m tall), a plasterboard edge, or a tape measure laid on the floor — then enter that real length.

4

Mark the distance you want measured

Tap the two points of the actual wall or span. The app calculates the real-world distance and fills it in for you.

> **ACCURACY**
>
> This is a fast on-site estimate, not a laser-accurate measurement. It works best when your reference object is on the same wall, at the same distance from the camera, as what you're measuring. Use a tape measure for anything that needs to be precise.

05 Measuring from a Floor Plan

Got a floor plan already — a PDF or a photo of a drawing? Upload it and pull the room dimensions straight off it.

1. **Tap "Upload Floor Plan"**

   Choose an image (JPG/PNG) or PDF of the plan from your files or photo library.

2. **Calibrate against the plan's scale**

   Tap the two ends of a printed dimension or scale bar already on the plan, then enter that real-world length.

3. **Mark the two walls of the room**

   Tap the start of the first wall, then the corner where it meets the second wall, then the far end of the second wall.

4. **Confirm and apply**

   Length and Width are calculated together and filled in automatically. Tap "Use Length & Width" to apply them.

> **NOTE**
>
> Only the first page of a multi-page PDF is read. For plans with multiple rooms, repeat the process for each room you want to quote.

06 Board & Layer Settings

Set the board size and layer count to match the job spec before reading off your materials.

SETTING	OPTIONS
Board size	2400×1200mm, 2700×1200mm, or 3000×1200mm
Layers	Single layer or double layer boarding
Insulation	Toggle on or off depending on the job spec

07 Reading Your Materials List

Once dimensions are entered, the Materials Required panel updates instantly.

- **Plasterboard** — total boards needed, already rounded up and wastage-adjusted
- **Drywall screws** — total count based on coverage per square metre
- **Jointing tape** — number of 30m rolls required
- **Joint compound** — number of 25kg tubs required
- **Insulation** — total square metres, if enabled

> **ADVANCED SETTINGS**
>
> Tap "Advanced Coverage Rates" to adjust screws per m², tape rate, compound rate and insulation wastage — useful if your usual supplier's spec sheet differs from the defaults.

08 Copying a Quote

Tap "Copy Quote" at the top of the Materials Required panel to copy a formatted materials list to your clipboard — ready to paste into WhatsApp, a text message, or a written quote.
